

Daresbury's Seven Principles of Science

When we do science:

- We need to learn through practical 'hands on' investigations as much as we can.
- We need questions to investigate, make us think, understand and progress.
- We need to learn together collaboratively and learn from each other.
- We need the teacher to be enthusiastic and knowledgeable about topic.
- We need great resources to help us learn.
- We need to learn within familiar contexts we recognise and can relate to.
- Whenever we can, we also need to learn outside the classroom and by having science visitors in school.

Agreed by the children, staff and parents of Daresbury Primary School
